

HAZE, SMOKE AND HEAVY FOG

WE ARE OFTEN ASKED ABOUT THE DIFFERENCES BETWEEN THE VARIOUS EFFECTS. ALL OF THESE ARE SAFE PRODUCTS AS THE FLUID IS MOSTLY WATER AND GLYCERINE.

HAZE IS A FINE MIST IN THE AIR, USED TO SHOW UP THE BEAMS OF LIGHT, PARTICULARLY FOR DANCE SHOWS, CONCERTS AND TELEVISION WHERE EFFECT, BUT NOT "FOGGING THE PLACE OUT" IS REQUIRED.

SHOWN HERE FOR "BLACK WEDDING"

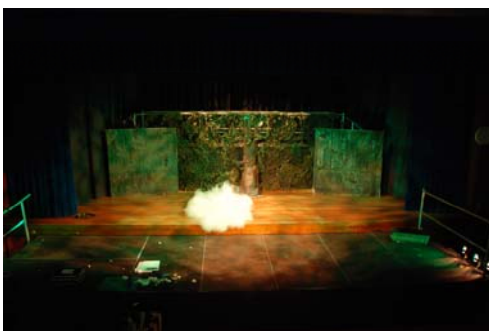

SMOKE IS A LARGER PARTICULATE AND SO THE EFFECT IS DENSER THAN HAZE. LEFT PHOTO ABOUT RIGHT, BUT, ENTHUSIASM CAN OFTEN LEAD TO "OVER DOING IT" AS SHOWN HERE ON THE RIGHT SAME SHOW, BUT...A FEW SECONDS LATER.

SHOWN HERE FOR "BABES IN THE WOODS"

HEAVY FOG ON THE OTHER HAND, BEHAVES LIKE "DRY ICE" BUT IS CREATED FROM A SMOKE MACHINE WITH A SPECIAL FLUID. THE SMOKE IS PASSED THROUGH A CHILLER UNIT AND HEAVY FOG IS PRODUCED. SOME OF THE HEAVY FOG MAY RISE BUT IT HELPS WITH EFFECTS SUCH AS THE GOBOS AND SPLIT FILTERS.

SHOWN HERE FOR "INTO THE WOODS"

**YOU WILL NEED TO ISOLATE THE ZONES OF THE FIRE ALARM SYSTEM AS IT WILL SET THE ALARMS OFF!
PLEASE CALL THE OFFICE FOR DETAILS 01322 350 351**
